

POWERFUL TECHNOLOGY TO SECURE PHI

Verisma Release Manager™ (VRM) has mastered the art and science of disclosure management. At the center of our extensive quality assurance efforts is our powerful, industry-first Technology Assisted Review (TAR) engine. We've developed advanced algorithms — unmatched by any vendor in the industry — that spot and flag potential concerns, alerting ROI specialists so they can review identified requests before final delivery to each requester.

VERISMA RELEASE MANAGER

COMPREHENSIVE “READ”

Our unsurpassed optical character recognition software reads all documents before they are released.

ID POTENTIAL ISSUES

The functionality identifies disclosures that might be unauthorized or inappropriate by comparing what it reads with an embedded comprehensive library of terms that represent potential compliance issues if not caught.

CUSTOMIZABLE LIBRARY

This library is customizable, allowing you to include any terminology unique to your organization.

EXPERT REVIEW

TAR highlights sensitive words it detects during a routine scan of each document (e.g., HIV or a psychiatric diagnoses) and alerts our expert team to review the document before release.

POWERFUL
ALGORITHMS,
EXPERT OVERSIGHT
MINIMIZE COMPLIANCE
EXPOSURE

Few worries top “compliance” when it comes to disclosure management. Pairing the precision of Verisma technology with the insight of our highly trained ROI experts equips HIM leaders with tools needed to protect their organization — and their patients.

ROI THAT PROMISES TO PROTECT

Built on more than 17 years of experience and the foundational principles of truth and accuracy, Verisma brings you a partnership you can trust with the compliance-driven technology you need. Our disclosure management system was built with an understanding of your needs, and every module and security tool was designed to help you feel compliance-confident.

Our partnership is truly a promise to put patient protection first.

VERISMA TECHNOLOGY ASSISTED REVIEW™

EVERY WORD, EVERY DOCUMENT

In addition to searching for key words and phrases, TAR also utilizes its powerful co-mingled identification capability to ensure every page represents the correct patient. Other systems might scan the header and footer of each page, review the first and last page of each record, or spot-check a small percentage of documents.

Not Verisma.

TAR leaves virtually nothing to chance with its ability to read and interpret every page. That means we are more likely to identify all potential issues throughout the record copy, preventing unauthorized disclosures and other problems before the records are released — keeping you and your patients as safe as possible.

The Verisma ROI specialists are highly trained, as well. Specific experts are assigned to each client account, so they familiarize themselves with the system's unique requirements — in addition to being fully versed in relevant payer, state and federal regulations or policies that govern protected health information and disclosure management.

Greater confidence. Better compliance. That's what Verisma TAR delivers to you.
