

FASTER TURNAROUND. INCREASED QUALITY PROTECTION. Introducing: AI Solutions by Verisma.

Health information management (HIM) teams have always tried to improve efficiency. Now, Verisma's artificial intelligence (AI) solution suite provides even more productivity gains and benefits. These tools accelerate turnaround and scale operations while always keeping a human-in-the-loop (HITL).

Smarter Workflows, Zero Compromise

Verisma's AI portfolio expedites critical steps in the release-of-information process.

- ▶ **Intake Intelligence** automates request categorization and fast-tracks data extraction and logging,
- ▶ **Comprehensive Integration Engine** seamlessly navigates EHRs with the help of robotic process automation (RPA) and application programming interface (API) integrations for reliable record retrieval,
- ▶ **Technology Assisted Review™** flags potential issues to staff, ensuring compliance and quality, and
- ▶ **Status Intelligence** uses a large language model (LLM) digital agent to provide 24/7 multilingual call center assistance, including real-time status updates.

AI Working for You, Not Instead of You

AI at Verisma accelerates intake, retrieval, review and support. HIM teams retain oversight. No client data is used for AI training, supporting compliance and adherence to best practices.

With intuitive functionality, support for multiple workflows, and rollout guided by your needs, Verisma's solutions are minimally disruptive. You can transform turnaround and ensure quality with AI that amplifies human expertise – never replacing it.
